

Overview

Accurate. Efficient. Versatile.

At Becker, we deliver state-of-the-art waterjet cutting services, providing precise, clean cuts across an extensive range of materials using high-pressure waterjet technology.

What is Waterjet Cutting? Waterjet cutting is an advanced method that uses an ultra-high-pressure stream of water—often combined with abrasive particles—to precisely cut materials. This cold-cutting technique allows for clean, distortion-free cutting without altering the material's structure or properties, ensuring superior accuracy and quality.

Why Choose Becker Waterjet Cutting Services?

- **High Precision & Accuracy:** Our waterjet cutting systems produce intricate shapes with exceptional precision, even for complex designs or fine details.
- **Material Versatility:** Efficiently cut virtually any material, including metals, plastics, composites, stone, ceramics, glass, and more.
- **No Heat Affected Zones (HAZ):** The waterjet cutting process generates no heat, eliminating the risk of thermal distortion or material degradation, ideal for sensitive or heat-sensitive applications.
- **Efficiency & Cost Savings:** Our efficient processes reduce waste, minimize finishing time, and lower overall production costs.
- **Rapid Turnaround Times:** We prioritize quick, reliable service to meet demanding schedules without compromising quality.

Our Waterjet Cutting Capabilities

- Precision and repeatability for prototypes and mass production
- Cuts thicknesses up to several inches
- Complex shapes and intricate patterns achievable
- Flexible handling of large-scale sheets or custom components

Typical Applications Include:

- Mechanical & Industrial Components
- Aerospace & Automotive Parts
- Architectural & Decorative Elements
- Electronics & Sensitive Equipment
- Custom Manufacturing & Prototyping

Experience the Accuracy, Efficiency, and Quality of Becker's Waterjet Cutting Services.

Contact us today to discuss your project requirements and see how our innovative cutting solutions can elevate your products.
